

## ARIES Workforce Alert

**Release 07/06/2022**

Good afternoon,

The ARIES team would like to provide updates regarding the release that took place on June 30, 2022.

- The duration of time that a link is valid for electronic signature for an IOP or assessment has been extended to 36 hours. This was done to allow customers more time to access their email and complete the signature process. We will continue to evaluate this and will make changes as needed.
- IOPs can now be backdated to the date of eligibility determination.
- The notification to case managers that the IOP or assessment has been acknowledged has been updated to include a hyper-link to take the user directly to the correct area within ARIES.
- There was a bug reported that referrals could not be made to individuals who have the RESEA case manager role. This bug has been resolved; referrals can now be made to those case managers.
- The bug that blocked training services from being closed has been resolved. However, there are some cases where there is an error that is received that says, “training provider must be local”. Should you receive this error the ARIES Helpdesk Chat can take the information and have the issue corrected. Once corrected for that training provider the error will not happen again We are working on a data fix that will address this error moving forward for all training providers.
- When creating a training service, the type of credential does not have to be entered.
- The Trade Petition can now be updated after submission. There is also the ability to add additional employers to a petition.
- **New feature:** When searching for customers you may need to check the box labeled “Include Disabled Customers” to get all results.
